DATA ANALYST GLOBAL LAYOFFS 2020-2023

DATA ANALYST PRESSENTAION

WHAT IS THE DATA ABOUT?

The data used in this analysis focuses on global layoffs occurring between 2020 and 2023. It covers both large and small companies across various industries and locations. The dataset includes key variables such as company name, industry sector, date of layoffs, number of employees affected, total funding received, and company stage.

This data is important to understand trends in workforce reduction, identify the most impacted industries, and analyze how external factors such as economic conditions or post-pandemic effects influence layoffs globally.

WHO IS THE DATA ABOUT?

The analysis focuses on companies across various industries and the employees impacted by layoffs, highlighting which sectors are most vulnerable.

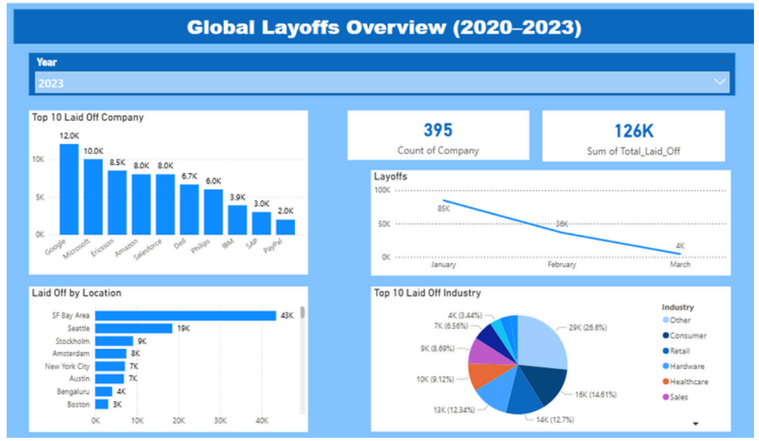
WHERE THE DATA MOST AFFECTED?

The dataset examines global distribution, identifying countries or regions with the highest number of layoffs.

WHY IS THE DATA ?

- Identify layoff patterns and trends
- Highlight the most affected industries
- Explore the relationship between company funding and layoffs
- Provide insights into the global job market condition

DATA VISUALIATION



This dashboard provides an overview of global layoffs trends, highlighting the most affected companies, industries, and locations from 2020 to 2023.

KEY INSIGHT

1. Layoffs peaked in 2022

There is a noticeable spike in layoffs on november, indicating waves of workforce reduction rather than a steady trend.

2. Various companies dominate layoffs

Most of these companies are technology-driven or digital platform businesses, such as ByteDance (social media), Zillow (real estate tech), and Instacart (delivery platform).

This indicates that the tech and startup sectors were the most affected by layoffs.

3. **Certain industries are more vulnerable**

The technology and startup sectors appear to have the largest share of layoffs compared to other industries.

4. The United States is the most affected location

The U.S. shows the highest number of layoffs, indicating a strong concentration of impacted companies in this region.

5. High funding does not always guarantee job security

Even companies like Meta, Uber, and Twitter with large funding amounts still conducted layoffs, suggesting that funding alone doesn't prevent workforce reductions.
